NOTICE REGARDING MEAT INSPECTION**NET-WEIGHT RULING APPLICABLE TO MEAT AND PRODUCT IN PACKAGE FORM**

The following ruling by the Food and Drug Administration respecting net weight is published for the information and guidance of inspectors in charge of meat inspection, and proprietors and operators of official establishments.

The Federal food and drugs act defines food in package form as misbranded if the quantity of contents is not plainly and conspicuously marked on the outside of the package. Exemption from this provision is afforded only for extremely small packages.

Unquestionably, the purpose of the law is broader than simply to prohibit shortage in weight or measure; its intent is to insure to purchasers of packaged foods accurate information as to the amount in the package.

The Food and Drug Administration has observed a distinct trend in the food industries generally toward placing declarations of net weight and measure in very small type, or on noncontrasting backgrounds, or in obscure positions on the label. In some industries there is a tendency toward the adoption of forms of declaration with which the public is not familiar. If the public conception of quantity of a given commodity is in terms of gallons, quarts, and pints, a declaration on the label of that commodity in terms of pounds and ounces does not convey adequate information.

At times it can be fairly inferred from an examination of the label that the manufacturer may have some reason for hesitating to tell the public how much of his commodity he is selling. This is particularly true where the amount is somewhat less than conventional units, as, for example, 14 ounces avoirdupois or 15 fluid ounces.

Declarations of quantity of contents must be expressed in terms in which the public conceives of quantity of the particular commodity to which the declaration is applied. The declarations must be conspicuous; that is, they must appear in such position on the package and in type of such size, and on such background,

as to insure observation. To guarantee this, a declaration in type of adequate size, on a contrasting background, properly separated from other statements and designs, should appear on the display panel of the package. If more than one panel is used for display, the declaration should appear on each.
